

Discuss the following docker commands with example:

1. Create one .py file

```
app.py
1 print("Hello World")
```

2. Create one docker file same one folder

```
Dockerfile > ...
1 # Base image
2 FROM python:3.9
3
4 # Set working directory inside container
5 WORKDIR /app
6
7 # Copy Python file into container
8 COPY app.py .
9
10 # Run Python file
11 CMD ["python", "app.py"]
12 |
```

Directory: D:\hello-docker			
Mode	LastWriteTime	Length	Name
----	-----	-----	-----
-a----	8/13/2025 10:40 AM	20	app.py
-a----	8/13/2025 11:10 AM	188	Dockerfile

3. Docker build -t my-python-app(to build image)

```
● PS D:\hello-docker> docker build -t hello-docker .
[+] Building 195.5s (9/9) FINISHED
=> [internal] load build definition from Dockerfile
=> => transferring dockerfile: 227B
=> [internal] load metadata for docker.io/library/python:3.9
=> [auth] library/python:pull token for registry-1.docker.io
=> [internal] load .dockerignore
=> => transferring context: 2B
```

```
● PS D:\hello-docker> docker run hello-docker
Hello World
```

The screenshot shows the Docker Build Cloud interface. On the left, there's a sidebar with options like Volumes, Builds (which is selected), Models, MCP Toolkit, Docker Hub, and Docker Scout. The main area is titled 'Build history' and shows a table of active builds for the 'hello-docker' image. The table includes columns for Name, ID, Builder, Duration, Created, and Author. There are five entries in the table, each with a small profile icon and a red 'trash' icon.

Name	ID	Builder	Duration	Created	Author
hello-docker	reexer	docker-hub	3m 15s	26 minutes ago	N/A
hello-docker	210v9l	docker-hub	0.0s	45 minutes ago	N/A
hello-docker	k529w6	docker-hub	0.0s	47 minutes ago	N/A
hello-docker	jgln40	docker-hub	0.0s	48 minutes ago	N/A
hello-docker	hy7dsp	docker-hub	0.0s	3 hours ago	N/A

4. Docker run my-python-app

```
● PS D:\hello-docker> docker run hello-docker
Hello World
● PS D:\hello-docker> ls
```

The screenshot shows the Docker Hub interface under the 'Containers' section. It displays a list of 7 running containers. Each container entry includes the name, container ID, image, port(s), CPU usage, last started time, and actions (stop, start, logs, etc.). The containers listed are: vigilant_agnesi, busy_matsumoto, wizardly_jamarr, elegant_swartz, busy_mclean, myubuntu, and eva21.

Name	Container ID	Image	Port(s)	CPU (%)	Last started	Actions
vigilant_agnesi	aa5a9508d623	ubuntu		0%	4 hours ago	
busy_matsumoto	ecc8a6eafa1b	hello-world		0%	3 hours ago	
wizardly_jamarr	5f8258012325	mon/dockerhub:latest		0%	3 hours ago	
elegant_swartz	fa10d8432390	hello-docker		0%	30 minutes ago	
busy_mclean	64680d889e1a	hello-docker		0%	30 minutes ago	
myubuntu	3881d3048fd1	ubuntu		0%	19 minutes ago	
eva21	9ffbd49bd431	ubuntu		0%	55 seconds ago	

```
Run 'docker run --help' for more information
PS D:\hello-docker> docker run -it --name eva ubuntu
root@9ffbd49bda31:/#
```

RAM: 0.94 GB CPU: 0.02% Disk: 2.39 GB used (limit 1006.25 GB)

This screenshot is identical to the one above, showing the Docker Hub interface with 7 running containers listed. The containers are: vigilant_agnesi, busy_matsumoto, wizardly_jamarr, elegant_swartz, busy_mclean, myubuntu, and eva21.

Name	Container ID	Image	Port(s)	CPU (%)	Last started	Actions
vigilant_agnesi	aa5a9508d623	ubuntu		0%	4 hours ago	
busy_matsumoto	ecc8a6eafa1b	hello-world		0%	3 hours ago	
wizardly_jamarr	5f8258012325	mon/dockerhub:latest		0%	3 hours ago	
elegant_swartz	fa10d8432390	hello-docker		0%	32 minutes ago	
busy_mclean	64680d889e1a	hello-docker		0%	32 minutes ago	
myubuntu	3881d3048fd1	ubuntu		0%	21 minutes ago	
eva21	9ffbd49bd431	ubuntu		0%	2 minutes ago	

1. Discuss the following docker commands with example: a.

docker images

```
PS D:\> cd dockerprac
PS D:\dockerprac> docker images
REPOSITORY      TAG      IMAGE ID      CREATED      SIZE
ampics          latest   6a2845420a4c  13 hours ago  1.58GB

16. Create a Pipeline, Write a Script and Build a Job in Jenkins-Set up an automated workflow in Jenkins by creating a pipeline project, writing a Groovy-based script with build, test, and deploy steps, and then executing the job to enable CI/CD automation.,

 Jenkins / All / New Item

New Item

Enter an item name

Select an item type

 Freestyle project
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

 Pipeline
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

 Multi-configuration project
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

A screenshot of a web browser displaying the Jenkins console output for a pipeline job. The URL is `localhost:8080/pipeline/120/1/console`. The left sidebar shows navigation links like Status, Changes, Console Output (which is selected), Edit Build Information, Delete build '#1', Timings, Pipeline Overview, Restart from Stage, Replay, Pipeline Steps, and Workspaces. The main content area is titled "Console Output" with a green checkmark icon. It displays the following log output:

```
Started by user admin
[Pipeline] Start of Pipeline
[Pipeline] node
Running on Jenkins in C:\ProgramData\Jenkins\.jenkins\workspace\MyPipelineJob_120
[Pipeline] {
[Pipeline] stage
[Pipeline] { (Build)
[Pipeline] echo
Building the project...
[Pipeline] }
[Pipeline] // stage
[Pipeline] stage
[Pipeline] { (Test)
[Pipeline] echo
Running tests...
[Pipeline] }
[Pipeline] // stage
[Pipeline] stage
[Pipeline] { (Deploy)
[Pipeline] echo
```

17. A Docker Compose file is a YAML configuration file (named `docker-compose.yml`) used to define and manage multi-container Docker applications. It describes services, networks, and volumes in a single file so that multiple containers can be started, connected, and managed together using simple commands.

```
Dockerfile
docker-compose > docker-compose.yml
  ▶ Run All Services
  1 services:
    ▶ Run Service
    web:
      3   image: nginx
      4   ports:
      5     - "8080:80"
    ▶ Run Service
    db:
      7   image: mysql
      8   environment:
      9     MYSQL_ROOT_PASSWORD: example
  10
```

```
PS D:\DockerPrac\docker-compose> docker-compose up -d
[+] Running 2/3
  ✓ Network docker-compose_default  Created          0.0s
  ✓ Container docker-compose-db-1   Started         0.4s
  ✓ Container docker-compose-db-1   Started         0.4s
  - Container docker-compose-web-1 Starting        0.4s

19. Create 3 replicas of one image using docker swarm.

```

PS D:\DockerPrac\docker-compose> docker swarm init
Swarm initialized: current node (iin0zrrulih9jb91vkh91v4n4) is now a manager.

To add a worker to this swarm, run the following command:

  docker swarm join --token SWMTKN-1-6daf50ket1kvdkosdtjb7gkq72978grsu7t60x9kmx5qztzevn-25aue0p4gjab0vh1dxum7hd7e 192.168.
  65.3:2377

To add a manager to this swarm, run 'docker swarm join-token manager' and follow the instructions.
PS D:\DockerPrac\docker-compose> docker service create --name myweb --replicas 3 -p 8080:80 nginx
lijf3qx7vpv4s586brizknwmf
